

Gyrex Cove for indirect light

The Gyrex cove for indirect lighting is quick to assemble, so you are assured of an amazing result in no time. The rounded top of these covers ensures optimal light distribution, transforming your space into an oasis of clarity and beauty. Be inspired by the seamless perfection and enjoy an unparalleled aesthetic that illuminates every corner of your project.

Mounting

The soffit can be attached directly to the structure of your false ceiling, allowing for a seamless finish.

It is positioned straight using a laser or level and secured to the ABA edges with drywall screws that have a drill point.

The joints are then finished with the same finishing class as the drywall, using paper joint tape.
