

Gyrex U-profile

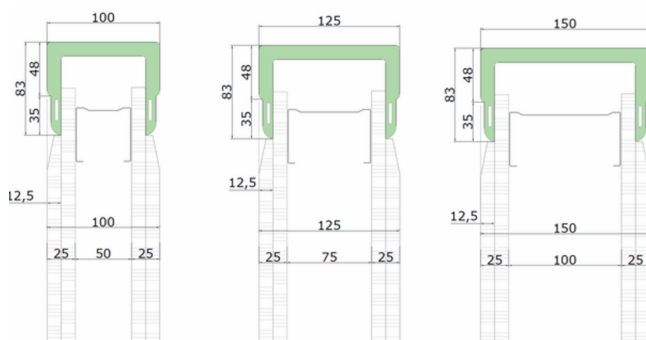

The Gyrex U-profile takes the quality and speed of reveal finishing to unprecedented heights. With the U-profile you enjoy an unparalleled finish of wall ends that are not only impact-resistant, but also create a perfect retombé for glass walls. Thanks to this innovative element you are assured of a professional result where both craftsmanship and efficiency come together.

Mounting

The U-profile is slid over the wall and then positioned straight using a laser or level.

Next, the ABA edges of the profile are secured with drywall screws that have a drill point.

To finish the joints, the same finishing class as the drywall is used, along with a paper joint tape.

The Gyrex U-profile is available in various wall thicknesses, each with a length of 3000 mm.
